Education

University of Michigan, Ann Arbor

B.S. in Computer Science (Expected May 2027)

- EECS 183 Showcase Grand Prize Winner (streaming video to an Arduino)

Experience

Agent Engineering Intern

Aristotle (AI tutoring startup, employee #6)

May 2026 – Aug 2026

- Shipped 111 merged PRs in three months across the tutor agent, observability, evals, email, and billing; most commits on the team in my final month
- Built live session observability on Cloudflare Durable Objects; traced dropped events to instance eviction (every 10–60s), fixed with epoch-tagged sequences
- Shipped PDF-by-link ingestion (credential-free fetcher, SSRF guards, atomic quota admission), replacing up to 155k tokens per turn with on-demand page reads
- Built a session-review agent in production that critiques ended sessions in Slack and proposes prompt edits behind a human approval gate

Data Science Intern

Enveda Biosciences / True Ventures Fellow

May 2025 – Aug 2025

- Coauthored [a paper](#) on NMR molecular networking for structure characterization (*Communications Chemistry*, 2025)
- Built a Discord–Slack bridge for a 190+ member AI founders network

Programmer

University of Michigan School of Information

Sep 2024 – May 2025

- Developed a plugin integrating U-M Maizey into Google Sheets
- Migrated legacy research dashboards to Fly.io, reducing deployment time and dependency overhead

Intern, U-M Information & Technology Services (Emerging Technologies Group)

May 2024 – Aug 2024

- Built gotocollege.umich.edu, matching students with 5M+ scholarships using agentic AI retrieval
- Designed and deployed RAG utilities that improved Maizey document recall from 74% → 86%

Projects

Lattice — Rust, Language Design

In progress, v1 October 2026. Functional language unifying spreadsheet formulas and structured programming, with one type system and lazy reactive evaluation across source files and cells.

Formulary — Python, Playwright, resolvelib

Package manager for Google Sheets introducing dependency resolution, versioned named-function packages, and reproducible spreadsheet builds.

astral.lol — Google Sheets, Language Design

Research playground exploring spreadsheets as a programming language. Includes esolang interpreters (Brainfuck, Befunge), algorithmic systems (pathfinding, fuzzy lookup), and stateful computation using only formulas and iterative calculation (no Apps Script).

- Built a chess engine that evaluates positions and generates legal moves at 1-ply using a PyTorch neural network trained on Lichess data, with the engine itself implemented entirely in spreadsheet formulas

Brickwise — Genetic Algorithms, Multimodal AI

Generated LEGO models from text and image prompts using genetic algorithms and mesh processing.

3rd Place, Silicon Flatirons 2025.

sheets.wiki — Technical Writing, Open Source

Founder and maintainer of a community-driven technical wiki documenting Google Sheets internals, semantics, and advanced patterns, including reverse-engineered behavior and undocumented edge cases.

Skills

Languages: Python, C++, R, TypeScript, Node.js, SQL

Frameworks/Tools: PyTorch, scikit-learn, Neo4j, PostgreSQL, React

Other: Google Sheets (advanced), Michigan Seal of Bilingualism (Spanish)

Selected Achievements and Community

- **Advent of Code 2023, 2025 (Google Sheets):** Ranked #1 globally among spreadsheet-based submissions; solved algorithmic problems using only spreadsheet formulas
- **Community Administration & Technical Leadership:** Administrator of a 4,000+ member technical help community for advanced spreadsheet development, partnered with a 22,000+ member Reddit community
- **Competitive Chess & Event Organization:** 2450+ Lichess rating; organized online chess tournaments featuring grandmasters with prize pools up to \$500
