jaeguntsong@gmail.com · github.com/JaegunS · [linkedin.com/in/jaeguns](https://www.linkedin.com/in/jaeguns) · astral.cafe

Education

University of Michigan, Ann Arbor

B.S. in Data Science, B.S. in Computer Science (Expected May 2027)

- EECS 183 Showcase Grand Prize Winner (streaming video to an Arduino)

Experience

Data Science Intern

Enveda Biosciences / True Ventures Fellow
May 2025 – Aug 2025

- Coauthored a paper on leveraging molecular networks for NMR spectral annotation (<https://doi.org/10.1038/s42004-025-01839-x>)
- Built a Discord-Slack bridge for a 190+ member AI founders network, improving cross-platform collaboration

Programmer

University of Michigan School of Information
Sep 2024 – May 2025

- Developed a plugin integrating U-M Maizey into Google Sheets
- Migrated legacy research dashboards to Fly.io, reducing deployment time and dependency overhead

Intern, U-M Information & Technology Services
(Emerging Technologies Group)

May 2024 – Aug 2024

- Built gotocollege.umich.edu, matching students with 5M+ scholarships using agentic AI retrieval
- Developed a chatbot for the Project Management Office
- Designed and deployed RAG utilities that improved Maizey document recall from 74% → 86%

Administrative Assistant, Songbird Café

Sep 2021 – Dec 2023

- Automated inventory, payroll, and invoicing workflows using Python and Google Sheets, reducing administrative time by 85%

Projects

Formulary — *Python, Playwright, resolvelib*

Package manager for Google Sheets introducing dependency resolution, versioned named-function packages, and reproducible spreadsheet builds.

astral.lol — *Google Sheets, Language Design*

Research playground exploring spreadsheets as a programming language. Includes esolang interpreters

(Brainfuck, Befunge), algorithmic systems (pathfinding, fuzzy lookup), and stateful computation using only formulas and iterative calculation (no Apps Script).

- Built a chess engine that evaluates positions and generates legal moves at 1-ply using a PyTorch neural network trained on Lichess data, with the engine itself implemented entirely in spreadsheet formulas

Anduin — *Google Sheets, Functional Programming*

Introduces record- and protocol-style abstractions to Google Sheets using pure formulas, enabling modularity and interface-like reasoning inspired by Clojure.

Brickwise — *Genetic Algorithms, Multimodal AI*

Generated LEGO models from text and image prompts using genetic algorithms and mesh processing.

3rd Place, Silicon Flatirons 2025.

sheets.wiki — *Technical Writing, Open Source*

Founder and maintainer of a community-driven technical wiki documenting Google Sheets internals, semantics, and advanced patterns, including reverse-engineered behavior and undocumented edge cases.

Skills

Languages: Python, C++, R, TypeScript, Node.js, SQL

Frameworks/Tools: PyTorch, scikit-learn, Neo4j, PostgreSQL, React

Domains: Data Analysis, Machine Learning, Systems & Tooling, Language Design, Agentic AI

Other: Google Sheets (advanced), Michigan Seal of Bilingualism (Spanish)

Selected Achievements and Community

- **Advent of Code 2023, 2025 (Google Sheets):** Ranked 1 globally among spreadsheet-based submissions; solved algorithmic problems using only spreadsheet formulas
- **Community Administration & Technical Leadership:** Administrator of a 4,000+ member technical help community for advanced spreadsheet development; provides technical support and professional guidance and collaborates with a partnered 22,000+ member Reddit community
- **Competitive Chess & Event Organization:** 2450+ Lichess rating; organized online chess tournaments featuring grandmasters with prize pools up to \$500; previously coordinated events for a large chess streamer (Eric Rosen), including tournament operations for a 3,600-member Discord community
